

Zhen Peng

Address: 400 Merrimac Trail #11, Williamsburg, Virginia 23185

Phone: (+1) 757-378-8642

Email: zpeng01@wm.edu

CAREER OBJECTIVE

Seeking to an entry-level position as a software engineer.

Research experience in parallel computing, graph processing, and high-performance computing systems.

EDUCATION

Ph.D. Candidate in Computer Science

08/2016 – Present

Department of Computer Science, College of William & Mary, Williamsburg, VA

Advisor: Prof. Bin Ren

M.S. in Computer Software and Theory

09/2013 – 06/2016

Department of Computer Science, Huaqiao University, Xiamen, China

Advisor: Prof. Tian Wang

B.E. in Computer Science and Technology

09/2009 – 06/2013

Department of Computer Science, Huaqiao University, Xiamen, China

INTERNSHIP EXPERIENCE

Software Engineering Intern

04/2021 – 09/2021

Kuaishou, US R&D Center, Palo Alto, CA

Automate the Model Implementation to TensorRT

- Translate models from TVM Relay IR to TensorRT Python code.
- Speed up the model deployment procedure and reduce the labor costs.

Accelerate Inference Through Operation Fusion in Convolutional Neural Network (CNN)

- Try to add customized operation fusion pass in TVM.
- Transform fused computational graph to TensorRT C++ code to accelerate the inference.

RESEARCH EXPERIENCE

Research Assistant

08/2017 – Present

Department of Computer Science, College of William & Mary

Accelerate Deep Neural Network Inference on Edge Devices (ongoing)

- Analyze inference procedure of TensorFlow Lite for Micro on microcontroller units (MCU).
- Speed up the inference procedure by tuned loop unrolling and customized quantization method.

Efficient Parallelization of Graph-based Approximate Nearest Neighbors Search (ANNS)

- Analyze and parallelize the best-first search algorithm for ANNS on the graph-based index.
- Reduce the intra-query latency on CPUs by a tailored parallelism scheme and synchronization mechanism.

Parallelizing Pruned Landmark Labeling: Dealing with Dependencies in Graph Algorithms

- Analyze and parallelize the sequential 2-hop labeling for shortest distance queries in large graphs.
- Reduce the query latency on CPUs using the parallel algorithm that breaks the dependency.

Efficient Parallelization of Graph Processing on Emerging Many-core Architectures

- Design the graph processing system for typical graph algorithms such as BFS to tap into many-core CPUs.
- Achieve good performance and scalability by be aware of data locality, load balance, and update conflicts.

PATENT

[1] "Multi-Level Intermediate Representation Decoder for Heterogeneous Platforms," U.S. Patent Application No. 17/524,619, Filing date: November 11, 2021

TECHNICAL SKILLS

Programming Languages: C++, C, Python

Frameworks and Tools: AVX-512, OpenMP, MPI, TensorFlow Lite for Micro, TVM, TensorRT, ONNX

AWARDS & HONORS

Student Travel Grands, PACT '18	2018
Student Travel Awards, ASPLOS '18	2018

TEACHING EXPERIENCE

College of William & Mary

Grading TA: CSCI 304 Computer Organization	02/2018 – 05/2018
Grading TA: CSCI 304 Computer Organization	09/2017 – 01/2018
Grading TA: CSCI 243 Discrete Structures	02/2017 – 05/2017
Grading TA: CSCI 141 Computational Problem Solving	09/2016 – 01/2017
